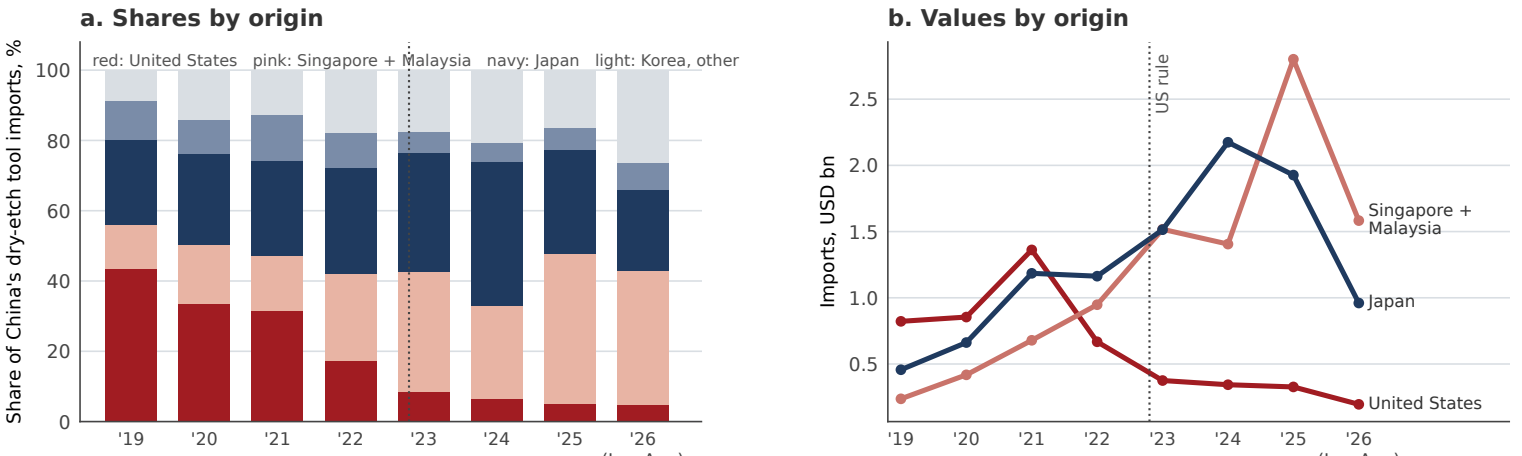
Origin is not nationality: the same American toolmakers, shipped from Asia

China's imports of dry-etch tools of United States origin fell from 43 percent of the total in 2019 to 5 percent in 2025, while imports from the same firms' Singapore and Malaysian plants rose from 13 to 43 percent; the origin of a shipment says little about who made it.



Source: GACC HS 84862041 (dry plasma etch) imports by country of origin, annual sums; 2026 is January–August. US, Singapore + Malaysia, Japan and Korea shown; other origins in grey. Customs record the country of origin, not the shipper; the main etch plants in Singapore and Malaysia belong to Applied Materials and Lam Research.
